Directory of Images No directory. Solution Of course, this is not the only way to approach this problem. The solution given above is very specific to the question you ask, and therefore I am unable to say if it is the best way to approach the problem. In general, when an empty directory is encountered, the file system utility usually tells you that that the directory is empty. So you could write a script that does just that: `#!/bin/bash #Delete empty directory if [[-d $1]] then echo "ERROR: Directory $1 already exists. Not deleting." exit 1 fi #Delete files if [[-f $1]] echo "ERROR: File $1 already exists. Not deleting." rm -rf "$1"` In the above script, the script will first check if the directory exists or not. If it does, it will then delete all files in that directory.

It will then run the `rm -rf $1` command and then it will run that command on the directory you told it to run it on. To execute this script: `chmod 755 empty_directory.sh ./empty_directory.sh /path/to/directory #!/bin/sh # # Copyright 2015-2017 Red Hat,`
